Intelligent Hand Sanitization

Mirador HEALTH

Mirador Health was launched to address the complex problem of reducing hospital-acquired infections with the industry leading innovative hand sanitizing solutions that drive healthier outcomes for today's hospitals and healthcare providers.

Research has validated that some health professionals suffer from "Omo syndrome[1]"—a belief that they are always highly clean and sterile. Many are visibly upset when their poor hygiene practices are exposed and are offended when it is suggested that they may be potential vectors of disease and are spreading virulent microorganisms among their patients. Unfortunately, behaviors are unlikely to change without very intentional intervention and education. Mirador Health offers the healthcare industry's first actionable solution for Hospital Acquired Infections that protects patients and care delivery organizations.

THE FACTS...

- The hands of clinical and environmental staff are the most common vehicles for transmitting microorganisms between patients.

- Frequent hand washing remains the single most important intervention in infection control.

- Hospital staff believes that they wash their hands more often than they actually do and overestimate the duration of hand-washing.

The Mirador Health System

The Mirador Health system pairs logistical intelligence and Bluetooth technology in a simple hand sanitization liquid dispenser that pairs with caregiver ID badges. Mirador Health enables the clinical monitoring, tracking, and reporting of real-time hand sanitization data to actively intervene, protecting both patients and the bottom line. Created by renowned software and firmware technologists and infectious disease experts, the innovative tech-enabled Mirador Health hand sanitizing solution drives healthier outcomes and a measurable ROI without requiring changes in existing workflows and protocols. Mirador Health reduces HAIs, improves HAC scores, and reduces or eliminates CMS financial penalties and future liability.
